

ARAHARAN LOGANAYAGAM

London, United Kingdom | araharan.x.loganayagam@hotmail.com | +44-79-09718634 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Results-driven SOC/Security Engineer with over 2 years of experience in penetration testing, vulnerability assessments, and security engineering, plus an additional year in software engineering. Proven expertise in conducting security assessments, implementing advanced security solutions, and delivering client-facing security reports with clear remediation strategies. Experienced in threat detection, incident response, and managing security measures within DevOps practices. Strong technical communicator with excellent stakeholder management skills and a customer-first mindset.

SKILLS

Technical Skills	Security Tools	Security Frameworks	Risk Assessment and Management
Penetration Testing, Secure SDLC, Threat Modelling, Cloud Security, Kubernetes Security, Container Security, Data security, Shell Scripting, PowerShell, Networking, AWS, Azure, Python, Bash, PowerShell, Golang, Kubernetes, Git, API Security, Linux Security, Windows Security, Active Directory, Entra ID, Incident Response, Endpoint Forensics	Burp Suite, SIEM, Endpoint Protection, Impacket, Splunk, DLP, Purview, Ansible, Metasploit, Zeek, Suricata, Nessus, Wireshark, Microsoft Sentinel, Microsoft365, Active Directory, Entra ID	OWASP Top10, MITRE ATT&CK, NIST 800-53, GDPR, PCI-DSS	Security Policy Development, Technical Report Writing and Documentation, Security Awareness Training

EXPERIENCE

TECEZE Ltd | Cyber Security Engineer

London, UK | 09/2022–Present

- Led comprehensive vulnerability assessments across 200+ endpoints and cloud workloads using Nessus and custom scanning tools, identifying and prioritizing critical security gaps
 - Conducted penetration testing exercises on internal infrastructure, discovering 15+ critical vulnerabilities and providing detailed remediation guidance to system owners
 - Performed tactical analysis of network traffic using Wireshark and Zeek to identify suspicious communications and potential security breaches
 - Built risk assessment frameworks and delivered monthly security posture reports to senior stakeholders, highlighting risk reduction trends and compliance status
 - Created custom KQL queries in Microsoft Sentinel and Splunk correlation rules to improve detection fidelity, reduce noise by 50%, and enhance visibility into both on-premises and cloud environments
 - Developed and deployed Python, Bash, and Golang scripts for SOC automation tasks including log enrichment, IOC reputation checks, and alert prioritization—reducing investigation time by over 40%
 - Built MITRE ATT&CK-mapped incident response playbooks for common TTPs (persistence via scheduled tasks, credential dumping indicators), increasing first-contact resolution rates
 - Planned and executed quarterly User Access Reviews (UAR) per regulatory requirements; facilitated review sessions with system SMEs and delivered compliance reports to clients
 - Supported cyber assurance activities including PCI-DSS evidence gathering and compliance audits; mapped control effectiveness to policy and framework requirements
 - Collaborated with client platform, identity, and application teams to scope vulnerabilities, align remediation efforts, and minimize operational impact through structured workshops

TECEZE Ltd | Security Analyst

Chennai, India | 07/2021 – 08/2022

- Triaged, investigated, and responded to 50+ platform alerts daily using SIEM tools; validated detections, scoped impact, and delivered clear remediation steps to customers
 - Performed forensic analysis of EDR telemetry and host artifacts (events, autoruns, services, scheduled tasks) to determine root cause and eradicate threats
 - Conducted comprehensive access permissions review across 5 critical systems using automated tools, identifying and revoking 30+ excessive privilege accounts
 - Developed SIEM correlation rules and incident playbooks that reduced incident response time by 50% (from 4 hours to 2 hours)
 - Built BI dashboards for vulnerability posture and UAR progress, providing exposure metrics by asset group and remediation velocity to brief senior stakeholders
 - Handled escalations from support teams; translated complex security incidents for non-technical stakeholders and maintained detailed documentation
 - Improved M365 detection fidelity through rule tuning, decreasing false positives by 25% and freeing up analyst time for genuine threats
 - Implemented organization-wide multi-factor authentication and secure single sign-on, achieving 100% employee adoption
 - Deployed EDR solutions on 200+ devices, resulting in a 30% reduction in malware incidents
 - Participated in security assessments and regulatory audits to ensure compliance with industry standards

Environment and Tools: Burp Suite, Nessus, Wireshark, OWASP Top 10, Microsoft Sentinel, Splunk, AWS, Azure, Active Directory, Kubernetes, Python, Golang, Ansible, Linux

SENZMATE Ltd | Software Engineer

Colombo, Sri Lanka | 08/2019 – 04/2020

- Developed secure backend services for IoT platform using Spring Boot and Java, implementing security best practices for API protection

- Utilized Angular and TypeScript for frontend development, incorporating security controls for user authentication and data protection
- Integrated AWS security services to ensure reliable and scalable cloud infrastructure with appropriate access controls
- Successfully delivered the first version of SenzAgro platform, meeting all security and functionality requirements

Environment and Tools: Spring Boot, Java, Angular, Docker, AWS, MQTT, HTML5, CSS

EDUCATION

University of West London | Master of Science, Cyber Security | Distinction

London, United Kingdom | 2022 - 2023

- Relevant Coursework: Penetration Testing, Security Operations, Application Security, Infrastructure Security, Data Security, Machine Learning for Security

University of Moratuwa | BSc (Hons), Information Technology | 2:1

Moratuwa, Sri Lanka | 2017 – 2021

- Relevant Coursework: Computer Networks, Network Security, Operating Systems, Data Structures and Algorithms, Software Security

PROJECTS

Blockchain and ML-based Malware Detection System (MSc Research)

Developed a decentralized system combining blockchain technology and machine learning for advanced malware detection and file integrity verification.

Implemented ML classifiers for threat detection and blockchain consensus mechanisms for secure verification.

Technologies: Python, Blockchain (Consensus Algorithms, P2P Networks), ML Classifiers, Threat Intelligence APIs

Network Security Assessment Tool

Built automated network scanning and vulnerability assessment tool for identifying security weaknesses in enterprise environments. Integrated with popular

vulnerability databases for comprehensive threat analysis.

Technologies: Python, Nmap, Nessus API, Network Protocols, Vulnerability Databases

Agricultural Social Network Security Implementation

Designed and implemented comprehensive security architecture for web and mobile agricultural platform, including secure authentication, data encryption, and API security controls.

Technologies: Spring Boot Security, OAuth 2.0, MySQL, Firebase Security Rules, SSL/TLS

CERTIFICATIONS

- Practical Ethical Hacking (TCM Security)
 - The Bits and Bytes of Computer Networking (Google)
 - Introduction to Cybersecurity Tools & Cyber Attacks (IBM)
 - Go Programming (HackerRank)

ADDITIONAL EXPERIENCE

- **Security Research:** Active participant in Capture The Flag (CTF) competitions and vulnerability research
 - **Cross-Cultural Communication:** Extensive international experience fostering adaptability and stakeholder management skills across diverse environments
